

Did you catch a bass with a radiotag?

A largemouth bass is shown in profile, facing left. A small, dark rectangular radiotag is attached to its back, just behind the dorsal fin. A thin line extends from the tag towards the top right corner of the page.

We are tracking radiotagged largemouth bass in Chicamuxen Creek of the Potomac River. We want to learn about their spawning habits so we can better protect their spawning habitats. If you catch a bass with a radiotag, please release the fish and contact:

Mary Groves  
Southern Region Manager  
Inland Fisheries, Maryland DNR

[mgroves@dnr.state.md.us](mailto:mgroves@dnr.state.md.us)

Please do not remove the radiotag from the fish. Doing so can harm the fish and hurt our study. We should have results from the study ready by winter of 2010.
